

017-删除工时记录

场景：根据jql语句，查询工时，然后删除，或者变更

```
def projectKey = 'TEST'
def startDate = '2020/12/01'
def endDate = '2021/01/09'
queryText = "worklogDate >= '" + startDate + "' AND worklogDate < '" + endDate + "'
AND project = " + projectKey
//Execute the query
try{
query = jqlQueryParser.parseQuery(queryText)
}catch(Exception ex) {
log.info("Error executing the query: " + queryText)
}

def search = searchService.search(user, query, PagerFilter.getUnlimitedFilter())

//Iterate the issues
search.results.each { documentIssue ->
MutableIssue issue = issueManager.getIssueObject(documentIssue.id)

def workLogManager = ComponentAccessor.getWorklogManager()
def logsForIssue = workLogManager.getByIssue(issue)

//Iterate the worklog of the issue
for (Worklog worklog : logsForIssue)
{
def date = new SimpleDateFormat("yyyy/MM/dd").format(worklog.getCreated())
if((date >= startDate) && (date < endDate)) {
//Delete the worklog
workLogManager.delete(worklog.getAuthorObject(), worklog, null, true)
}
}
}
```
